4 hour weather forecast singapore.

A 20-pound "recomp" could entail losing 20 pounds of fat or gaining 20 pounds of muscle, but it most often involves losing 15 pounds of fat and gaining 5 pounds of muscle, or some blend in between. Designing the best physique includes both subtraction and addition. THE 100-UNIT SLIDER: DIET, EXERCISE, AND DRUGS. How, then, do we get to 20 pounds? Imagine a ruler with 100 lines on it, representing 100 total units, and two sliders. Not just for geeks, but for anybody. That's because the geek-tar-chy has a new book on its shelves, wedged in between Getting Things Done and The ClueTrain Manifesto. It's enough to make a lumberjack cry. If you don't shut the hell up, a man twice your age is going to whip your ass right out here in front of 1-4 traffic. As a female geek, I've lived through the broader culture's obsession with physical appearance that is foisted on women, and to a lesser degree on men. How far we haven't come. It was amusing, and one of hundreds of similar comments on this particular blog post, but the fact remained: I had gained 34 pounds of muscle, lost 4 pounds of fat, and decreased my total cholesterol from 222 to 147, all in 28 days, without anabolics or statins like Lipitor. The entire experiment had been recorded by Dr. Peggy Plato, director of the Sport and Fitness Evaluation Program at San Jose State University, who used hydrostatic weighing tanks, medical scales, and a tape measure to track everything from waist circumference to bodyfat percentage. He would also become, in the words of more than a few, a particularly "angry genius." One of Jones's protégés, Ellington Darden PhD, shares a prototypical Jones anecdote: In 1970, Arthur invited Arnold [Schwarzenegger] and Franco Colombo to visit him in Lake Helen, Florida, right after the 1970 Mr. Olympia. In any case, you don't need to understand any of the biology, just as you don't need to understand radiation to use a microwave oven. It does not mean a 20-pound reduction in weight. She noted, first, that there wasn't much terribly new or different to Ferriss' diet, that low-carb diets like this one have been around for some time, and she expects that "many people will lose weight if they follow it, though I don't think that the diet is capable of all the claims in the book." Dr. Low Dog also expressed some concern about "the very limited number of vegetables to choose from, the lack of fruit in the diet and the high intake of meat" since there's "little reason to limit non-starchy vegetables, berries and apples," and thought it was "unwise" to permanently remove whole grains from your diet. New exhaust pipes will solve the problem. A DRUG IS A DRUG IS A DRUG. Calling something a "drug," a "dietary supplement," "over-the-counter," or a "nutraceutical" is a legal distinction, not a biochemical one. None of these labels mean that something is safe or effective. Ferriss, then, is recommending controlled bouts of being out of control. No problem. More than 15 minutes is redundant and will just result in burning and a forced break from the beach. He expects me to believe that he dropped 4% in bodyfat as a result of eating 7000 calories? Ah, the Internet. "Why are you looking for your keys under the streetlight?" they ask. Boiled is boiled. There are no shortcuts." As for the Ferriss approach: "It's dangerous," Jon told me bluntly. This allows us to split the 100 units into three areas that total 100. The sweetest thing about the geek world is its notional rejection of the quick, superficial judgements that drive offline interaction, and its romantic notion of an online world in which we can be seen and loved for who we are (or at least what we text). Higher temperatures will not make it "more boiled." Higher temperatures just consume more resources that could be used for something else more productive. If you need 15 minutes in the sun to trigger a melanin response, 15 minutes is your MED for tanning. Wired magazine has called Tim "The Superman of Silicon Valley" for his manipulation of the human body. That's out of step with what makes geek culture sing. The home environment might have had something to do with it, seeing as his parents, grandfather, great-grandfather, half-brother, and half-sister were all doctors. From humble beginnings in Oklahoma, he would mature into one of the most influential figures in the exercise science world. She's at the top of the field. The organs and glands that help repair damaged tissue have more limitations than your enthusiasm. If you're a 220-pound male, you just need to climb 27 flights of stairs to burn it off. F\*cking hell, right? of 54°F water 200 mg of allicin extract before bed. These are the types of prescriptions you should seek, and these are the types of prescriptions I will offer: RULES THAT CHANGE THE RULES. Everything Popular Is Wrong. This is clearly a lie. Sad little manatee. "It can creep into the other days." That makes sense. First, I looked at Ferriss' eating plan, which he calls the "Slow-Carb Diet": Eat almost exclusively protein and veggies, make it easy by just keeping a few meals in rotation, and stick with it by letting yourself eat anything for one day each week. When not acting as a human guinea pig, Tim enjoys speaking to organizations ranging from Nike to the Harvard School of Public Health. In response to researchers who drew conclusions about muscular function using electromyography (EMG), Arthur attached their machines to a cadaver and moved its limbs to record similar "activity." Internal friction, that is, Jones lamented his fleeting time: "My age being what it is, universal acceptance of what we are now doing may not come within my lifetime; but it will come, because what we are doing is clearly established by simple laws of basic physics that cannot be denied forever." He passed away on August 28, 2007, of natural causes, 80 years old and as ornery as ever. Jones left a number of important legacies, one of which will be the cornerstone of everything we'll discuss: the minimum effective dose. The Minimum Effective Dose (MED) is defined simply: the smallest dose that will produce a desired outcome. Jones referred to this critical point as the "minimum effective load," as he was concerned exclusively with weight-bearing exercise, but we will look at precise "dosing" of both exercise and anything you ingest. Anything beyond the MED is wasteful. To boil water, the MED is 212°F (100°C) at standard air pressure. He responds confidently, "Because there's more light over here. 10:00 mins. "You have to be careful with binging on one day of the week," Low Dog say. Press a few buttons in the right order and you're done. In our context: 80 seconds as a target is all you need to understand. Binge eating is by its nature an out of control act. It's a successor (though not a sequel) to the author's previous hit, The 4-Hour Workweek. Gaining 34 lb in 28 days requires a caloric surplus of 4300 calories per day, so for a guy his size, he must have eaten 7000 calories a day. He was just blabbing in his German or whatever and Arthur was having a hard time understanding what he was saying. I could write a whole column or five on Ferriss' take on sex, but I need those four hours for my workouts.) The book's uptake among the blogging and tweeting masses has left me wondering for months: how will this staggeringly ambitious book change the notoriously body-neglecting geek culture? But given the extreme recommendations that Ferriss doles out as effective — only four hours of exercise per month, "binge days," and just a few hours of nightly sleep, to name a few — I had to ask some experts whether following the Ferriss gospel was

Mind:To remove stored fat – do the least necessary to trigger a fat-loss cascade of specific hormones.To add muscle in small or large quantities – do the least necessary to trigger local (specific muscles) and systemic (hormonal 2) growth mechanisms.Knocking over the dominoes that trigger both of these events takes surprisingly little. This year's big nerd book is The 4-Hour Body, by Tim Ferriss. On the one hand, I share my fellow geeks' tendency to live from the neck up, and to neglect physical self-care in favor of a brain-in-a-jar lifestyle. Jon didn't hedge: "People are always looking for shortcuts around their physical needs. It's a 20-pound change in appearance. If you weigh less than 120 pounds, aim for 10 pounds; otherwise, 20 pounds is your new, specific goal.Even if you have 100+ pounds to lose, start with 20.On a 1-10 attractiveness scale, 20 pounds appears to be the critical threshold for going from a 6 to a 9 or 10, at least as tested with male perception of females.The term "recomposition" is important. Even if your pecs are bulging, they can still sport a pocket protector. of 20 lbs. Would you want to get on a plane if you knew the pilot only got two hours of sleep a night?" These comments have me worried about the prospect of a SXSX in which participants may indeed be newly buff and slender, but may also be tired, injured, and prone to overdoing the Texas BBQ. If you need to include 100 or 1,000 test subjects and can only afford to measure a few simple things, you need to paint those measurements as tremendously important.Alas, mentally on your hands and knees is no way to spend life, nor is chafing your ass on a stationary bike.Instead of focusing on calories-out as exercise-dependent, we will look at two underexploited paths: heat and hormones.So relax. By focusing so much on how his recommendations can manifest as external attractiveness – and barely mentioning the psychological benefits of self-care, like the seratoninin boost you get from exercise – Ferriss encourages the geek world to embrace surface-level judgements. "If you followed this to the letter, there's a good chance it could work," Heather told me. Confused and angry? In encouraging the geeks of the world to reconnect to their physical beings, let's not swing the pendulum too far in the other direction. Over many years of just the kind of experimentation that Ferriss recommends, I have been forced to conclude, reluctantly, that I am happier and higher-functioning when I eat well, don't drink, get plenty of sleep, and exercise regularly (a conclusion that has really cut into my SXSX partying, among other things). Author's note: I contacted Mr. Ferriss to give him the opportunity to respond to this piece and his staff declined the opportunity. Human growth hormone (HGH) can be extracted from the brains of all-natural cadavers, but unfortunately it often brings Creutzfeldt-Jakob disease with it, which is why HGH is now manufactured using recombinant DNA.Besides whole foods (which we'll treat separately as "food"), anything you put in your mouth or your bloodstream that has an effect--whether it's a cream, injection, pill, or powder--is a drug. We may not always live up to that ideal (chat roulette, I'm talking to you) but we can still celebrate the aspiration to create some realm of social life that is structurally resistant to our society's obsession with looks and first impressions. The kidneys, as one example, can clear the blood of a finite maximum waste concentration each day (approximately 450 mmol, or millimoles per liter). Could I leap tall buildings on the strength six cat naps? I talked with an old friend, Dr. Jonathan Emens, now an Assistant Professor of Psychiatry at Oregon Health & Science University where he conducts sleep research. It's cheap to estimate, and it is a popular variable for publication in journals. Just dare me."Within five seconds Arnold had apologized, got back in the car, and was a perfect gentlemen for the next three or four days.Jones was more frequently pissed off than anything else.He was infuriated by what he considered stupidity in every corner of the exercise science world, and he channeled this anger into defying the odds. It's not about feeling great as much as it is about looking great. All you need to know is:80 seconds is the dose prescription.More is not better. So Arthur was getting annoyed and told him to quiet down, but Arnold just kept talking and talking.By the time they got onto the Interstate, Arthur had had enough. He is a tango world record holder, former national kickboxing champion (Sanshou), guest lecturer at Princeton University, and faculty member at Singularity University, based at NASA Ames Research Center. Yet how helpful is it to encourage geeks to take an interest in their bodies if the process involves using self-loathing as a motivation (by looking at unflattering photos of yourself naked) or focuses on achieving the waist-to-hip ratio that makes you most attractive to the opposite sex? Treat them all as such. I sent this section to my Pilates instructor, Heather Low, owner of Meridian Pilates Studio and a former Vice-President of the Pilates Association of Canada. THE MINIMUM EFFECTIVE DOSEFrom Microwaves to Fat-LossArthur Jones was a precocious young child and particularly fond of crocodiles.He read his father's entire medical library before he was 12. Arthur picked them up at the airport in his Cadillac, with Arnold in the passenger seat and Franco in the back. "Setting aside the metabolic, cognitive, and emotional impact of not getting enough sleep, the risk of car accidents or on-the-job accidents alone should keep people from trying this. SXSX may provide a very tangible demonstration of Ferriss' impact, if the geek crowd shows up looking slimmer, trimmer and stronger. You'll be able to eat as much as you want, and then some. Indeed, your greatest challenge will be resisting the temptation to do more.The MED not only delivers the most dramatic results, but it does so in the least time possible. One hundred percent exercise can get you there, but if injuries or circumstances interfere, the return to baseline is fast./\_\_\_\_\_/(100% drugs) = side effects//\_\_\_\_\_ (100% exercise) = easy to derailHere is the ratio of most of the fat-loss case studies in this book:\_\_\_\_\_/\_\_\_\_\_/\_\_\_\_\_(60% diet, 10% drugs, 30% exercise)If you're unable to follow a prescribed diet, as is sometimes the case with travel or vegetarianism, you'll need to move the sliders to increase the % attention paid to exercise and drugs. I reviewed this plan with Dr. Tieraona Low Dog, M.D., and Director of Fellowship at the University of Arizona Center for Integrative Medicine, and a former member of the Advisory Council for the National Institutes of Health National Center for Complementary and Alternative Medicine. "But only if you're already a body person – you know, someone who is used to doing really precise movements." Her concern was for the more sedentary readers Ferriss' book targets: "People who haven't moved very much in their lives are going to have a hard, hard time doing these exercises well. These three areas represent diet, exercise, and drugs.An equal split would look like this:\_\_\_\_\_/\_\_\_\_\_/\_\_\_\_\_(33% diet, 33% drugs, 33% exercise)It is possible to reach your 20-pound recomp goal with any combination of the three, but some combinations are better than others. Learning diet and exercise principles is priority #1, as these are the bedrock elements. But how many of us really have the discipline (or money) to (as he advises) throw out all the junk food that remains uneaten at the end of our weekly day of madness? There are probably 12 stoplights in between the airport and the Interstate, so it was a lot of stop-and-go driving.Now, you have to know that Arthur was a man who talked loud and dominated every conversation. Next, I looked into his recommendations for exercise and muscle gain. Now, with Body, that same Silicon Valley crowd gets a particularly tech-oriented take (he packs the book with software tips) on every aspect of physical self-care, ranging from exercise to diet to sleep. If you do a marathon three-hour workout and make your bloodstream look like an LA traffic jam, you stand the real chance of hitting a biochemical bottleneck.Again: the good news is that you don't need to know anything about your kidneys to use this information. She also worried about women following his suggested two glasses of wine a day, due to the relationship between alcohol and breast cancer. TIMOTHY FERRISS, nominated as one of Fast Company's "Most Innovative Business People of 2007," is author of the #1 New York Times, Wall Street Journal, and BusinessWeek bestseller, The 4-Hour Workweek, which has been published in 35 languages. During this forced break from the beach, let's assume one week, someone else who heeded his natural 15-minute MED will be able to fit in four more tanning sessions. Don't distract yourself with labels that are meaningless to us.THE 20-POUND RECOMP GOALFor the vast majority of you reading this book who weigh more than 120 pounds, 20 pounds of recompotion (which I'll define below) will make you look and feel like a new person, so I suggest this as a goal. That stimulus, just like the 212°F for boiling water, is enough to trigger certain prostaglandins, transcription factors, and all manner of complicated biological reactions. It doesn't work quite as advertised.German poet Johann Wolfgang Goethe had the right perspective: "Mysteries are not necessarily miracles." To do the impossible (sail around the world, break the four-minute mile, reach the moon), you need to ignore the popular.Charles Munger, right-hand adviser to Warren Buffett, the richest man on the planet, is known for his unparalleled clear thinking and near-failure-proof track record. This, dear friends, is referred to as "parking lot" science, so-called after a joke about a poor drunk man who loses his keys during a night on the town.His friends find him on his hands and knees looking for his keys under a streetlight, even though he knows he lost them somewhere else. I'd like to try them all myself, but some of them, like the single-leg deadlift, have a real potential for injury." Then I checked up on Ferriss' most outrageous suggestion: living on just a few hours of sleep by breaking sleep into six rigorously-scheduled 20-minute naps each day. This included putting 63.21 pounds on champion bodybuilder Casey Viator in 28 days and putting himself on the Forbes 400 list by founding and selling exercise equipment manufacturer Nautilus, which was estimated to have grossed \$300 million per year at its zenith.Het had no patience for fuzzy thinking in fields that depended on scientific clarity. He is four shades darker, whereas you have returned to your pale pre-beach self. Not only is this wasteful, it is a predictable path for preventing and even reversing gains. Ferriss claims a possible 3% body-fat reduction in a single month by combining the slow-carb diet with just 15 minutes a week of pre-breakfast exercise, and offers a number of specific strength-building exercises (emphasizing kettlebells) that he says deliver big fat-loss and muscle-gain payoffs with minimal reps and frequency. Legal herbs can kill you just as dead as illegal narcotics. My total time in the gym over four weeks?Four hours.3 Eight 30-minute workouts.The data didn't lie.But isn't weight loss or gain as simple as calories in and calories out?It's attractive in its simplicity, yes, but so is cold fusion. One hundred percent drugs can get you there, for example, but it will produce the most long term side effects. To the extent that Ferriss helps the geek crowd discover, and even take an interest in, the below-the-neck parts of their body, that seems like a good and helpful thing. What are "transcription factors"? So he pulled over to the side of the road, got out, walked around, opened Arnold's door, grabbed him by the shirt collar, yanked him out, and said something to the effect of, "Listen here, you son of a bitch. You don't need to know. Workweek resonated because it showed how the information age created the conditions to liberate professionals from the chains of the office, spolling out the steps your average professional could take in order to create a "lifestyle design" that let them work wherever, whenever and, ideally, as little as possible. That is the buton.If, instead of 80 seconds, you mimic a glossy magazine routine--say, an arbitrary 5 sets of 10 repetitions--it is the muscular equivalent of sitting in the sun for an hour with a 15-minute MED. Don't complicate them.For a given muscle group like the shoulders, activating the local growth mechanism might require just 80 seconds of tension using 50 pounds once every seven days, for example. How did he refine his thinking to help build a \$3 trillion business in Berkshire Hathaway?The answer is "mental models," or analytical rules-of-thumb4 pulled from disciplines outside of investing, ranging from physics to evolutionary biology.Eighty to 90 models have helped Charles Munger develop, in Warren Buffett's words, "the best 30-second mind in the world. Its liberation methodology was especially viable for professionals with highly specialized skill, like IT geeks, who ate it up. Supplements, often unpatentable molecules and therefore unappealing for drug development, can decrease cholesterol from 222 to 147 in four weeks, as I have done, or they can be inert and do absolutely nothing.Think "all-natural" is safer than synthetic? For example: /\_\_\_\_\_/\_\_\_\_\_(10% diet, 45% drugs, 45% exercise)The numbers need not be measured, but this concept is critical to keep in mind as the world interferes with plans. Split peas are all-natural, but so is arsenic. The rising amount of time we now spend online may have caused the pendulum to swing too far: to create a culture of Internet potatoes who remain glued to the screen, missing out on exercise and compromising their physical health. As for the binges? He sees the essence of everything before you even finish the sentence."Charles Munger likes to quote Charles Darwin:Even people who aren't geniuses can outthink the rest of mankind if they develop certain thinking habits.In the 4HB, the following mental models, pulled from a variety of disciplines, are what will separate your results from the rest of mankind.New Rules for Rapid RedesignNO EXERCISE BURNS MANY CALORIES.Did you eat half an Orso cookie? I can see better."For the researcher seeking tenure, grant money, or lucrative corporate consulting contracts, the maxim "publish or perish" applies. "I took a big swig of Malbec and read the blog comment again. You should be.As usual, the focus is on the least important piece of the puzzle.But why do scientists harp on the calorie? (And more, Jones's words should echo in your head: \*REMEMBER: it is impossible to evaluate, or even understand, anything that you cannot measure."80 secs. Relying too much on drugs makes your liver and kidneys unhappy.The percentages will also depend on your personal preferences and "adherence," which we cover next.1. Credit is due to Dr. Doug McGuff, who's written extensively on this and who will reappear later.2. In fancier and more accurate terms, neuroendocrine.3. In this case, the "4-Hour Body" is quite literal.4. These "mental models" are often referred to as heuristics or analytical frameworks. But we need sleep the way we need oxygen and food. Gilbness aside, the popularity of the Ferriss book has me concerned at a deeper level. But he couldn't get Arnold to shut up. He goes from A to Z in one move.
